March 5, 2015 -- Densitas is highlighting presentations given at ECR 2015 in Vienna about its breast density assessment software.

Densitas Research Edition is a free, Web-based application that allows users to batch upload DICOM images for processing and receive assessed breast density measures for each study, according to the firm.

In a presentation given at the meeting on the technology itself, study results using 1,823 images showed excellent agreement between Densitas Research Edition density measures and radiologists' visual assessment, Densitas said.

The application was also used in a case-control study of parenchymal patterns and breast cancer risk. Finally, a poster presented at ECR compared mammographic density measures from Densitas Research Edition with typical clinical risk factors in evaluating breast cancer risk during screening mammography, according to the company.
